Programming: Python, T-SQL, Git.
Data Visualization: Tableau, Power BI.
Cloud Computing: AWS.
Spreadsheets: Excel, Google Spreadsheets.

Diabetes in Pima women Project
This project analyzes through different elements the probabilities of developing diabetes in Pima women and the possible health complications they could develop, through a Bayesian hypothesis.

Online Retail Sales Store Data Analysis
This project consists of a detailed analysis of sales data from an online retail store for the years 2010 to 2011. It highlights revenue by country, shopping habits by day and time, most popular products and largest orders.

Attendance at the National Cinematheque of Mexico during 2019 - 2023
This project analyzes in detail the attendance preferences at the Cineteca Nacional de México from 2019 to March 2023, including attendance data during the Covid-19 global pandemic.

Experience

Mentorness   Remote
Data Analyst - Intern   March 2024 - June 2024
- Cleaned data using Python, developing a function to remove outliers based on the interquartile range (IQR) for applicable columns.
- Performed ETL (Extract, Transform, Load) processes on data using Python.
- Formatted and aggregated data to perform calculations.
- Created dashboards and reports to visualize data insights using Tableau.
- Conducted queries and analysis using SQL, utilizing views to manage data.
